

Experience

dori — Founder

Jan 2026 - Present

- Building an all-in-one platform from the ground up to help independent coffee shops grow revenue and strengthen customer communities — owning product, engineering, and go-to-market
- Architecting a full, high-performance stack — custom websites, native iOS apps, and a unified backend for payments, orders, and customers — powering engagement features like win-back notifications and retention-focused UX
- Onboarding a first client through active launch — a 6+ location coffee brand doing 8,000+ online orders/month

Valon — Software Engineer

Jan 2024 - Jan 2026

- Led key projects and 3+ engineers (varying by project) on the Financial Admin team, driving delivery across teams as a core on-call engineer
- Co-designed and built a unified financial system with cross-functional teams — modeling money movement as per-party ledgers with double-entry accounting — to enforce high-stakes correctness across 300K+ servicing expenses on 1M+ loans
- Shipped 10+ product suites enabling mortgage servicing operators to handle complex expense workflows — government agency claims, vendor disputes, and auto-processed invoices
- Partnered closely with servicing operators to understand their problems firsthand, using those insights to shape product and engineering decisions

DoorDash — Software Engineer

Feb 2021 - Jan 2024

- Helped lead a novel, automated market-intelligence system for managing 1000s+ markets during crises like Hurricanes Ian and Idalia, letting operators respond in real time — expanding ETAs and pausing ordering as storms approached — to suppress support cases and reduce failed-to-deliver orders
- Implemented Dasher app features (Incentives, Scheduling, and more) and ML models predicting Dasher-to-order ratios, feeding pipelines that proactively rebalance supply and demand to improve marketplace health, ETA upkeep, and delivery-time accuracy

Honey/PayPal — Software Engineering Intern

Summer 2020

- Built integrations on the TwoTap team to programmatically execute purchases on behalf of users and connect with partner products
- Built, tested, and deployed a webhook system from scratch to securely ingest users' account transactions for internal use

DoorDash — Software Engineering Intern

Summer 2019

- Improved Logistics ML models through PCA, hyperparameter tuning, and feature engineering, lifting user conversion by 0.15% (~\$10K/day projected)

Education

University of Southern California M.S. and B.S. Computer Science

Class of 2020

Awards

Kleiner Perkins Engineering Fellow

Summer 2019

- Selected in the top 2% of 5K+ engineering applicants to join a KP Portfolio startup and receive mentorship from industry leaders
